

# MATTHEW JUN

APPLICATIONS DEVELOPER | FULL-STACK ENGINEER | DATA & AUTOMATION

Huntington Beach, CA • 562-205-5834 • Jun.w.matthew@gmail.com • LinkedIn • mwjun.github.io

## PROFESSIONAL SUMMARY

Applications Developer and Full-Stack Engineer experienced in building business applications, modernizing legacy systems, optimizing SQL, and turning operational data into executive-ready Power BI dashboards. Background spans ERP- and QMS-connected workflows, Angular and React interfaces, PHP/Laravel services, relational databases, automation, security remediation, and production deployments. Known for connecting engineering, operations, and leadership needs with maintainable technical solutions.

## CORE EXPERTISE

| SOFTWARE ENGINEERING                                                                              | AI ENGINEERING                                                                             | CLOUD ENGINEERING                                                             |
|---------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| .NET, Django, Angular, Vue.js, React, TypeScript, Node.js, REST APIs, SQL, secure web development | Multimodal RAG, computer vision, PyTorch, Transformers, vector databases, LLM applications | AWS IAM, EC2, Lightsail, Terraform, Docker, Kubernetes, CI/CD, cloud security |

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                      |

JSL Benefits  
Web Developer / IT Specialist

Walnut, CA  
Jan 2018 - Jan 2019

- Developed and launched a React website supporting customer acquisition and ongoing content updates.
- Prepared and cleaned business data using Python, PostgreSQL, and Excel for reporting and operational use.
- Built Power BI dashboards to improve visibility into business and campaign performance.
- Managed code with Git and GitHub and streamlined deployment workflows to shorten release turnaround.

ADDITIONAL EXPERIENCE

First Step Learning  
Behavioral Therapist

Huntington Beach, CA  
Oct 2024 - Mar 2026

- Analyze qualitative and quantitative behavioral data to measure intervention effectiveness and guide treatment decisions.
- Track client progress, identify patterns, and communicate data-informed adjustments to the care team.

Fullerton College  
Supplemental Instruction Math Instructor

Fullerton, CA  
Jan 2021 - Jan 2024

- Led algebra, calculus, and statistics workshops, using feedback and performance data to help raise exam scores by 30%.
- Mentored more than 30 students per semester and supported fellow tutors in refining instructional methods.

EDUCATION

California State University, Fullerton  
Bachelor of Science in Computer Science

Fullerton, CA  
Completed 2024

CERTIFICATIONS

Google Data Analytics Professional Certificate  
Alteryx Certifications  
AWS Solutions Architect Certification - In Progress

SELECTED PROJECTS

**Crypto Arcade (Private)** - Live crypto prediction challenge with exchange data, weighted signals, optional AI analysis, player scoring, Firebase authentication, and Stripe subscriptions; built with Vue.js, TypeScript, Vite, and Express.

**Meal Roulette (Private)** - Full-stack TypeScript nutrition platform with AI recipe generation, GraphQL services, macro-based recommendations, ingredient substitutions, meal tracking, and automated tests.

**Blackjack Pro (Private)** - Cross-platform SwiftUI and React training app with a blackjack engine, Hi-Lo card counting, strategy recommendations, practice drills, and player statistics.

**TraderBot v3** - Python stock backtesting application for simulating trading strategies and potential returns using yfinance, Pandas, Tkinter, AWS S3, MVC architecture, and CI/CD pipelines.

**NeuralVision** - Local image and webcam object detection using PyTorch, Hugging Face, YOLO, OWLv2, DETR, OpenCV, MediaPipe, and a drag-and-drop desktop GUI.

TECHNICAL SKILLS

|                |                                                                                                                                                |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| Languages      | JavaScript, TypeScript, Python, SQL, PHP, C#, C++, Java, R, HTML, CSS                                                                          |
| Frameworks     | .NET, Angular, Vue.js, React, React Native, Vite, Django, Laravel, Node.js, Express.js, Pandas, PyTorch                                        |
| Data           | Power BI, Tableau, SYSPRO, uniPoint QMS, PostgreSQL, MySQL, Microsoft SQL Server, BigQuery, Excel, Alteryx                                     |
| Cloud & DevOps | AWS IAM, EC2, Lightsail, Terraform, Azure, Google Cloud, Docker, Kubernetes, CI/CD, Git, GitHub, Linux                                         |
| AI             | Transformers, Multimodal RAG, Computer Vision, neural networks, PyTorch, vector databases, LLM applications                                    |
| Security       | Web application security, session security, malware analysis, IAM policies, SQL injection remediation, CSRF, HTTPS/HSTS, Wireshark, Metasploit |
| Methods        | REST API design, relational database design, OOP, Agile/Scrum, UML, probability and statistics                                                 |
